

StoreSafe

Use digital evidence to resolve incidents faster

StoreSafe lets you print images and create evidence CDs to share with law enforcement

The GE Interlogix StoreSafe is a digital video recorder and multiplexer with Triplex functionality, plus one-button printing and CD recording. It's ideal for stand-alone security systems in small-business facilities such as restaurants, convenience stores and any retail environment that requires the ability to easily retrieve, copy and share video evidence to settle disputes and prosecute thefts.

StoreSafe is easy to operate, so managers or shift employees can easily and quickly produce evidence of a security incident. If you have a dispute or suspect customer theft or internal shrinkage, a simple search by time and date or alarm event retrieves crisp digital images of the event. You can then send selected images directly to a connected printer, or record an evidence CD that can be played back on any PC with a CD drive.

StoreSafe's Triplex functionality lets you continue recording while you view recorded or live events, and the included WaveReader software lets you watch video on any networked PC. You can also program separate recording rates and settings for each connected camera. You can program StoreSafe to send an e-mail to one or two recipients whenever an alarm occurs.

StoreSafe also comes in an advanced model that adds single-channel audio recording, remote PTZ control and the ability to use an interface to associate point-of-sale (POS) text with corresponding video.

StoreSafe offers all the advantages of digital recording—including clearer images, instant searches and dramatically increased storage capacity—and adds the ability to print images and create evidence CDs with the touch of a button.

StoreSafe features

- Creates evidence CDs to share with law enforcement
- Prints images directly to an on-site printer
- Displays multiscreen live or playback video while recording
- Programmable record rates, modes and image quality by individual camera
- Instant searches by date, time and alarm/event
- E-mail notification upon alarm, video loss or change of record status
- WaveReader software to view live or recorded images from a remote PC and send recorded information via e-mail

- Choice of four- or 16-camera configuration
- Record rate of up to 30 pps (system total for all cameras)
- VCR-like controls, including jog/shuttle

StoreSafe Advanced features

- Associates POS/ATM text with recorded video using a ProBridge interface
- Synchronized single-channel audio
- PTZ camera control from a remote location

GE Interlogix

StoreSafe features

One-button printing

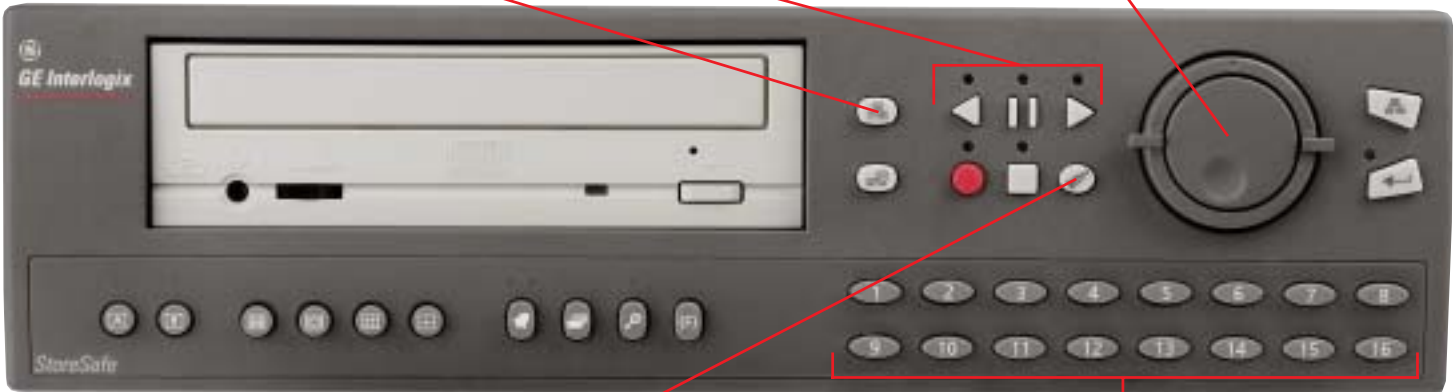

With a connected printer, you can print selected images with the push of a button.

Familiar, easy-to-use controls

StoreSafe features the same controls you're used to on VCRs and multiplexers, making it easy to operate.

Precision control

The jog/shuttle dial lets you zip through noise-free images or view them frame by frame with no distortion.

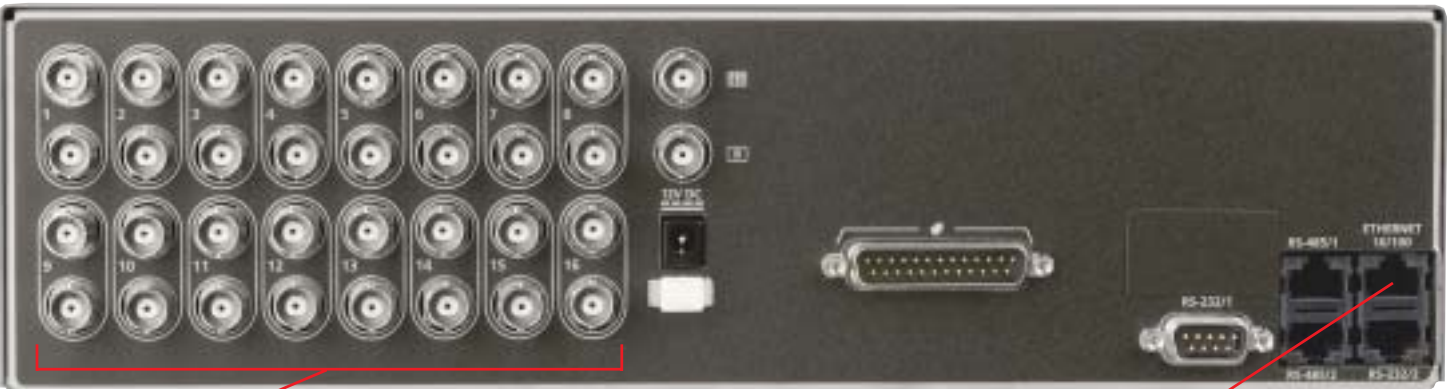

Quick access to recordings

Search for images by date, time or camera. Upgrade to StoreSafe Advanced and you can search by POS/ATM text.

Program each camera separately

You can customize recording rate, mode and image quality individually for each connected camera.

Room to grow

StoreSafe is available with four or 16 camera inputs, and includes a looping output for each camera.

Archive months of images

With multiple hard-drive sizes available, StoreSafe can save days, weeks or months of high-resolution images.

Network ready

Connect StoreSafe to your computer network and use the included WaveReader software to view live or recorded images on your PC.
